

INO press 2D-02-CAP

Automatic two-post press for caps

Automatic two-post INO press 2D-02 is designed to transfer labels by heat on caps and other materials up to the maximum dimension of 330 x 150 mm. Two posts enable maximum use of time and maximize printing performance.

Operator can choose between two programs: work with hot-peel or cool-peel transfers.

Automatic two-post press operation description:

1. Material (T-shirt or other) is put on working panel covered with silicone foam rubber.
2. Transfer is put at a chosen position on material.
3. Pressing key to confirm chosen positions.
4. Heating platform moves automatically over chosen transfer spot and lowers onto copy put over printed material; selected pressure and temperature allow ink transfer from paper to printed material.
5. When selected time is elapsed heating platform lifts and moves automatically towards second post in hot-peel mode. In cool-peel mode heating platform waits for operator to launch next command.

Automatic press allows pre-heating or drying of printed materials prior to printing.

Technical characteristics

Performance	up to 200 transfers per hour
Heating platform temperature	adjustable from 20 to 220°C
Pressing time	adjustable from 0 to 99 seconds
Pre-heating time	adjustable from 0 to 99 seconds
Heating platform dimensions	basic version for caps and flaten 330 x 150 mm additional platforms to transfer on umbrellas, sleeves, gloves, socks can be easily added
